

Look for Cost-Saving Options When Choosing a Commercial Pressure Washer

by Aaladin Industries and Steel Eagle

Maintenance costs, downtime, rising fuel prices...all of these impact your efficiency and your profitability. Your choice in pressure washers directly impacts your bottom line.

When selecting a pressure washing system, look for a solution that minimizes operation costs. All pressure washers cost money to operate, and fleet washing cleaning projects often require their washers work longer and harder than most. Choosing a washer that conserves fuel as well as minimizes time to refuel and maintain will help protect your bottom line – and your customer's.

A good example, AaLadin holds an exclusive patent on technology that will essentially pay for your washer over a short period of time. The more hours used per week, of course, the faster you rack up the savings. Our units save up to 38 percent on fuel over any other pressure washers. We call this innovation our Exclusive Exchange Technology.

Other advantages to this technology are being 98% efficient as compared to other equipment lines that grasp for just up to 75%. Stack temps are as low as 85° as opposed to 650°, which allow our units to be vented with CPVC straight out of the wall, saving hundreds or thousands of dollars in traditional stacking. For your industries' heavy usage, it's really a "no brainer." For example, if you were to use one of our LP machines an average of just 20 hours/week at the national average of \$2.87/gallon you would save \$6,208.38 in just a year's time. As you can see, it doesn't take long to enjoy

using a free pressure washer.

Another cost-saving item is our clutch system. With many systems, if a technician forgets to shut down your washer when they set down the gun for awhile, the pump goes into bypass and heats the water, which speeds wear and results in the need for costly premature pump replacements. With our clutches, as soon as you let go of the trigger, the pump is shut down preventing the previously mentioned damage. Smart right?

The second thing to look at when choosing the most cost-effective system is the tools you attach to your washer. Steel Eagle has a tool that is a necessity for fleet washers. Most of the time fleet washing services do a great job with the outside of the vehicle, but what about the underside where grease, salt and corrosive road debris collect? Traditional wands just don't reach up under the vehicle well enough to remove those damaging materials. That's why we created the Bottom Feeder Undercarriage Cleaner. No product on the market deals with tough jobs like it can. The spray pattern is the product of four nozzles, two of which are 0° nozzles that cut through the toughest dirt, and two of which are 15° nozzles that fan out to sweep away the debris.

The alternating combination of this nozzle pair makes the perfect one-two cleaning punch! The Bottom Feeder was one

of the first of its kind and top of the line quality, with features including:

- Only 5.5" of clearance needed allowing for low profile vehicles
- Powder coat paint
- Adjustable handle with adjustment for operator comfort
- Tilt handle for further reach under vehicles
- Guard for spray bar protection
- High quality low profile swivel
- 4000 psi rated
- 24" cleaning area
- 250° F max.

Keep your customers' fleets free from salt, grease and other debris. Protect their vehicles' resale value and have a professional looking fleet. Clean difficult to reach areas without the use of a hoist, and decrease the man hours needed to protect their vehicle investment. See the Bottom Feeder in action at www.steeleagle.com.

We understand your time is important and you need the correct product for your application. Take a minute to discuss your particular cleaning situations with your Steel Eagle sales person. They can recommend the perfect system utilizing the correct accessories for the job. No matter what you are cleaning, Steel Eagle has a system that will do the job with ease and speed.

AaLadin Cleaning Systems offers pressure washers to fit any situation.

We do this because we understand you aren't the same as every other fleet out there. We pride ourselves on being the innovator of many pressure washer features. We also are proud to be offering our exclusive Eco-Green High Efficiency Line of Equipment. Please go to www.aaladin.com or visit your local AaLadin distributor to learn how our products can save you time and money.
